

Proximex Crosses a New Milestone and Surpasses 250 Bi-directional Global Integrations

San Jose, Calif. (Business Wire) – May 7, 2013 – Proximex™, the global leader in physical security information management (PSIM) and integrated situational intelligence, today announced that the company has reached a significant milestone, surpassing 250 bi-directional global integrations. Proximex has experienced tremendous growth in products, services and project development since its inception in 2004 with the number of projects growing from 60 to more than 100 in just over a year. The company has also expanded its footprint by adding more internationalization, with additional language packs to cover all the major global continents, North and South Americas, Europe, the Middle East and Asia.

This milestone comes on the heels of the recent release of Surveillint™ 6.5, the latest version of the company's flagship PSIM technology product. Surveillint 6.5 offers new product capabilities that enhance visualization and situational awareness, improving operator productivity and performance to support the largest and most complex customer environments. Built on its highly scalable and robust service oriented architecture and Business Logic engine, Surveillint can now process 7 times more alerts in real-time than the previous version, Surveillint 5.0. When tested on a standard performance class server, Surveillint 6.5 demonstrated real-time alert processing that is up to 17 times faster than what the competition claims today.

“Exceeding 250 integrations is a tremendous milestone for Proximex, and with the launch of Surveillint 6.5 in Europe, we will continue to establish Proximex as a leader in the PSIM industry while effectively delivering value and managing the needs of our diverse customer environments,” said Larry Lien, vice president of product management at Proximex. “Our customers have come to expect our brand to provide unparalleled bi-directional integrations in a timely manner as well as innovative products and service to help them support their most complex and sophisticated environments.”

Proximex will be exhibiting at the IFSEC International 2013 Conference, NEC Birmingham, May 13-16, 2013. Attendees can visit booth #5/G40 for demos of Proximex's innovative technology, including Surveillint 6.5, which is now available in Europe, and to learn more about robust partner integrations.

About Proximex

Based in San Jose, Calif., Proximex is the global leader in physical security information management (PSIM) and integrated situational intelligence. Global customers operating in a variety of mission critical environments applaud Proximex solutions for delivering the fastest set up and deployment, the highest in scalability, availability and failover capabilities, and the most robust integrations in the industry. Proximex solutions join and correlate information from disparate security systems into one centralized environment, thereby transforming massive amounts of data into useable, actionable information. Leveraging the company's IT heritage, Proximex solutions integrate physical and logical security systems with network and health monitoring technologies to catch multi-pronged attacks and relay important business-level information.
