

## **Proximex and Inova Solutions Increase Customer Security Management with New Partnership**

**San Jose, Calif. (Business Wire) – April 10, 2013** – Proximex™, the global leader in physical security information management (PSIM) and integrated situational intelligence, announced today the integration of its Surveillint™ solution with Inova Solutions' OnAlert LED displays, powered by Lightlink® software. With this new collaboration, security incidents will be managed more efficiently providing users with increased visual communications about threat levels throughout the premises.

The Surveillint system, leveraging Inova LightLink® software, automatically sends preprogrammed, targeted and first responder messages from a variety of emergency communication and life safety platforms. Additionally, these messages can also be sent manually. OnAlert LED signs then clearly display this critical information to provide an additional mode of communication ensuring students, faculty and employees are aware of an emergency or crisis and how to proceed to safety. Users of the Surveillint system can also easily change and centrally control the visual display information.

“Partnering with Proximex is an ideal fit with Inova’s strategy to ensure schools and business can easily integrate visual textual information into their emergency notification solutions,” said Pete Sisti, CEO Inova Solutions. “Our solutions have similar value propositions, that is, we combine data from various sources into common views and deliver that information quickly where it’s needed. We’re excited about the value of Proximex’s offering and the value our joint solution and partnership brings to the market.”

“Proximex Surveillint has integrated with many disparate security systems and devices to retrieve information and deliver a centralized view, however it is equally important to efficiently communicate information outward to holistically manage a security situation,” said Larry Lien, vice president of product management at Proximex. “Proximex worked with Inova to quickly and easily integrate Inova Lightlink to our Surveillint PSIM solution. As a result, it delivered customers the ability to send messages and threat levels to the Inova displays based on a security incident identified from a video, access control or other security device.”

This strategic integration enables Proximex customers to track and audit messages, monitor the status of the Inova system and equipment, and proactively identify and resolve any system failure and equipment issues. Visit the Proximex booth at ISC West 2013, #22097, for demos of our innovative technology and to learn more about our robust partner integrations.

### **About Proximex**

Based in San Jose, Calif., Proximex is the global leader in physical security information management (PSIM) and integrated situational intelligence. Global customers operating in a variety of mission critical environments applaud Proximex solutions for delivering the fastest set up and deployment, the highest in scalability, availability and failover capabilities, and the most robust integrations in the industry. Proximex solutions join and correlate information from disparate security systems into one centralized environment, thereby transforming massive amounts of data into useable, actionable information. Leveraging the company’s IT heritage, Proximex solutions integrate physical and logical security systems with network and

health monitoring technologies to catch multi-pronged attacks and relay important business-level information. For more information, visit [www.proximex.com](http://www.proximex.com).

**About Inova Solutions**

Inova Solutions is a leading provider of visual emergency communication solutions, including OnAlert® textual LED displays. Inova partners with leading Life Safety, Network Mass Notification and Integrated Notification Providers to provide schools, universities, enterprises and government facilities with more holistic, multi-modal emergency communication solutions.
