Proximex Surveillint 6.5 Solution Outperforms Competition in PSIM Market

San Jose, Calif. (Business Wire) – April 04, 2013 – Proximex™, the global leader in physical security information management (PSIM) and integrated situational intelligence, today announced the next level of the company's flagship product, Surveillint™. The release of Surveillint version 6.5 raises the bar for PSIM technology within the industry, offering new product capabilities that enhance visualization and situational awareness, improve operator productivity and improve performance to support the largest and most complex customer environments.

Surveillint 6.5 further extends its ability to support graphical information systems (GIS) and ability to integrate live map data with the full support of ESRI ArcGIS enabling Surveillint operators to leverage the widest variety of map and geographically referenced data as they monitor environments and respond to events. The operator interface has been updated to support more sophisticated and advanced video controls often only found in advanced video management systems and extensive interactive bi-directional controls with connected third-party systems where operators can interact and send sophisticated commands with third-party systems through simple controls, greatly simplifying operation and minimizing operator errors. The results are improved operator efficiencies and better organizational response to events.

Proximex leverages its deep roots in enterprise-class software design to further improve the performance of Surveillint 6.5. Built on its highly scalable and robust service oriented architecture and Business Logic engine, Surveillint can now process 7 times more alerts in real-time than the previous version, Surveillint 5.0. When tested on a standard performance class server, Surveillint 6.5 demonstrated real-time alert processing that is up to 17 times faster than what the competition claims today.

"Today, managers are under increased pressure to mitigate their risks, address compliance requirements and control operational costs," said Ken P. Cheng, chief technology officer at Proximex. "Surveillint 6.5 provides new and enhanced capabilities that provide operators with an even more integrated, holistic view of their environment with advanced controls without sacrificing usability. Our customers rely on Proximex for continued innovation to help them support their most complex and sophisticated environments. This latest version of Surveillint allows us to continue to show our ability to leverage the power of service oriented architecture to further establish Proximex as the leader in the PSIM industry."

Surveillint 6.5 implements a number of feature enhancements, including an updated user interface that increases the speed for operators to identify and retrieve critical information about events. In addition, a new, intuitive drag-and-drop video control lets users collect information and respond to incidents faster. In-screen cameras also provide operators with assets to manage and operate cameras while keeping their eyes on the video.

About Proximex
Based in San Jose, Calif., Proximex is the global leader in physical security information management (PSIM) and integrated situational intelligence. Global customers operating in a variety of mission critical environments applaud Proximex solutions for delivering the fastest set up and deployment, the highest in

scalability, availability and failover capabilities, and the most robust integrations in the industry. Proximex solutions join and correlate information from disparate security systems into one centralized environment, thereby transforming massive amounts of data into useable, actionable information. Leveraging the company's IT heritage, Proximex solutions integrate physical and logical security systems with network and health monitoring technologies to catch multi-pronged attacks and relay important business-level information.
