

Challenge

- Increasing awareness of visitor activity to ensure safety

Why Surveillint™

- Track subjects across camera views with Surveillint and EZ Track™

Results

- Faster incident management
- Improved team communication
- Lack of camera coverage exposed by EZ Track

WORLD'S MOST FAMOUS PUBLIC ASSEMBLY FACILITY

This popular public assembly facility holds occasions of all kinds, including concerts, plays and sporting events. The security team must constantly monitor visitor activity to ensure the safety of visitors and employees. Putting enthusiastic individuals in a crowd environment and adding special factors like alcohol can lead to negative incidents. Concern for public safety prompted this security team to implement Surveillint and its EZ Track video investigation solution to help investigate actions and events that occur on the premises.

Surveillint was chosen to connect 550+ legacy cameras into a Joint Operations Center to visually secure appropriate areas. In addition, EZ Track was installed to track subjects across camera views for incident management. As an added benefit, a test run of EZ Track during the installation process demonstrated to the security team that camera coverage was lacking in several areas. Once the facility chose to secure these areas with additional cameras, the security team began using Surveillint and EZ Track in the Joint Operations Center to help keep all parties informed of security incidents. In the future, this facility plans to add new security cameras and eventually replace the legacy cameras with updated systems for additional situational awareness. With Surveillint, migration to new video systems will be a breeze.

About EZ Track

EZ Track makes tracking subjects across multiple camera views as easy as the click of an arrow. Subjects can be followed from camera to camera without the need to memorize the many camera IDs/locations or manually search recorded video clips. Operators can track subjects backwards through recorded video in time or catch up with them in real time. In addition, multiple camera views can be monitored in tandem and video images snapped and exported quickly and easily. EZ Track is the clear choice for tracking moving subjects, especially among hundreds or thousands of people.
