<u>**FOR IMMEDIATE RELEASE:**</u>

Proximex Surveillint PSIM from Tyco Security Products Now Offers Unparalleled Situational Awareness and Communications Capabilities

Surveillint 8 features a unique intelligent alarm triggering capability, SMS and MMS integration for cost effective mass notification, and a tool for fast Enterprise Dashboard deployment

WESTFORD, MA. August 12, 2015 — Tyco Security Products, part of Tyco, the world's largest pure-play fire protection and security company, has announced the newest release of its Proximex Surveillint PSIM solution, which provides security operation centers with unparalleled situational awareness and communication capabilities through enterprise dashboards, contact management, social media integration and a new module that raises operator alarms based on correlated events.

A new Analysis Module enables alarms to be raised on combinations of events that are separated by time or space without the clutter of extraneous alerts. For example, a site might want to raise an alert only when a combination of sensors, e.g. a fence motion sensor and video analytics, report an event in the same location. The Analysis Module also can **uniquely trigger operator alerts for events that may otherwise be ignored**,. e.g. raising an invalid access attempt alarm if someone repeatedly tries to access a secure location by using a card at multiple doors.

"We're committed to giving security organizations around the world as much information as possible about potential threats and the **quickest, most cost-effective ways to communicate with their communities**," said Michael Mesaros, Group Product Manager, Proximex, part of Tyco Security Products. "Operators can now receive automatic notification of weather, earthquake and other events, and they now have the ability to deploy a cost-effective mass-notification solution," Mesaros continued. "This capability can be used, for example, to implement a crowdsourced, 'say something, text something' incident reporting system."

This latest release of Surveillint features a new development tool that allows deployers to **quickly build custom dashboards that display real-time operational information** from security, building management and enterprise application systems. Security operations centers can, in one convenient display, monitor the number and types of open alarms, operator response times, the status of doors, cameras and sensors in the environment, and other operational metrics.

"Our customers want to be able to continuously monitor their security and operational status," said Stephen Moody, Business Development Manager for Ireland-based systems integrator ViS Security Solutions Limited, which deployed Surveillint for a local hospital. "This new ability to design custom enterprise dashboards which combine data from a variety of security and operational systems will help us address that need and deliver additional value to our customers."

Safer. Smarter. Tyco™   *Access Control, Video, Location-Based Tracking and Intrusion. UNIFIED.*

About Proximex
Proximex, a leader in physical security information management (PSIM) solutions, is part of the Security Products business unit of Tyco, the world's largest pure-play fire protection and security company. Proximex solutions integrate existing and new systems and technologies in a centralized command and control center to ensure that incident information is no longer trapped within disparate systems, but brought together in context with security policies and operations for analysis and resolution. Global customers operating in a variety of mission critical environments trust Proximex solutions to deliver the fastest set up and deployment, the highest in scalability, availability and failover capabilities, and the most robust integrations in the industry. Leveraging the brand's IT heritage, Proximex solutions integrate physical and logical security systems with network and health monitoring technologies to catch multi-pronged attacks and relay important business-level information. Proximex has serviced more than 250 bi-directional global integrations and covers all the major global continents, North and South Americas, Europe, the Middle East and Asia.
